+91 9600460410 venkatachalapathys1996@gmail.com [in Catch My LinkedIn Profile Here](#)
Hyderabad, Telangana, India – 500085

PROFESSIONAL SUMMARY

Experienced Cloud Professional with 6 years of experience in optimizing Development and Data engineering methodologies. Skilled in automating CI/CD pipelines, infrastructure as code, and leveraging cloud technologies for efficient and reliable deployments. Proven ability to collaborate cross-functionally, optimizing development processes for accelerated time-to-market. Dedicated to continuous learning and staying updated on emerging technologies to drive ongoing improvement in DevOps practices

EDUCATION

SRI KRISHNA ARTS AND SCIENCE COLLEGE – Coimbatore, TamilNadu
Master of Science – Software Systems – 8.5 CGPA (April 2019)

CERTIFICATIONS

- **AWS Developer** | [Certifications](#)
- **AWS Cloud Practitioner** | [Certifications](#)
- **Azure** | [Certifications](#)

CORE SKILLS

- **Programming Language:** Python, PySpark, Terraform, Shell-Script, Yaml, API Gateway
- **Database:** MySQL
- **Integrating:** Jenkins, Azure DevOps, GitHub Actions & Gitlab Pipeline
- **Cloud:** AWS, GCP
- **Versioning Tools:** GitLab, GitHub & Bitbucket
- **Ticketing Tools:** Service-Now, Zendesk
- **Monitoring Tools:** Datadog, Grafana, Prometheus

WORK EXPERIENCE

- | | |
|--|-------------------------------|
| HTC Global Service – Data Platform Engineer, Statefarm | [June 2022 – Present] |
| <ul style="list-style-type: none">• Providing the permission to the consumer, to access the data and building up the cross-account functionality from the Lake Account | |
| HTC Global Service – CI/CD Functional Engineer, Disney | [Sep 2021 – June 2022] |
| <ul style="list-style-type: none">• Taking care on Integration and Deployment Functionality and generating the code Quality Reports using Sonar-Cube | |
| NanoNino – Associate Engineer, FedEx | [Nov 2019 – SEP 2021] |
| <ul style="list-style-type: none">• Monitoring the relational database count and generating the reports for the image by publishing through the CloudFront | |
| Sun Software Solutions – System Administrator | [Apr 2019 – Nov 2019] |
| <ul style="list-style-type: none">• Backup & restoring the system and migrating the server to the AWS instance | |

PROJECTS

Project : Statefarm

Environments: [AWS, API-Gateway, Lambda, Terraform, Databricks, Cloud-ERA, GitLab, PySpark, ServiceNow, And Unix/Linux]

Roles & Responsibility:

Migrating the data from on-prem to AWS and provisioning the glue job for the data's in s3 and pushing into the Athena to build the Dashboard

- My proficiency lies in seamlessly integrating multiple Glue jobs through Glue workflows, while ensuring rigorous data validation within the Athena resource
- Directed transferring file from HDFS to S3 using Cloud Era Manager through Apache-NIFI process
- Gained valuable experience with Lake Formation concept, I ensured minimal permissions for users accessing data while executing a resource link to facilitate cross-account access to the database
- Automated user onboarding in Amazon QuickSight using Python's Boto3 and AWS Lambda, dynamically assigning users to groups based on CloudTrail logs
- Getting the data from an API and writing the data into a CSV file and uploading into the Athena Table for Business Intelligence purpose
- Proficient in designing and implementing AWS Step Function to orchestrate and automate complex workflow efficiently
- Building up the SSH layer through lambda function to transport the data from AWS S3 to On-Prem SFTP server
- Proficient in sharing Glue Catalog to the Trusted Cross Account through Lake Formation and Glue Resource Policy
- Migrating the data from redshift to S3 using Serverless stacks and making the data to be populated in Athena through Catalog Functionality when data resides in the Redshift
- Working on REST API associated with lambda function to share the results to the consumer through function URL

Project : Disney

Environments: [AWS, API-Gateway, Lambda, Terraform, Azure Devops, GCP Cloud Functions, GitHub, NPM-Build, Grafana, Docker, Kubernetes, HashiCorp-Vault, ServiceNow, Unix/Linux, Jira, And Python Client]

Roles & Responsibility:

Taking care on the deployment of node.js application and monitoring the cluster resources parallelly solving the deployment failure through Jenkins

- Engineered infrastructure with Terraform, reducing deployment time by 30%, and proficient in Terraform import command
- I have extensive experience in implementing monitoring solutions like Prometheus and Grafana to efficiently collect and visually represent metrics, and successfully implemented Kubecost to monitor and manage Kubernetes spending
- Proficient in leveraging Boto3 to automate workflows and efficiently manage resources
- Implemented CloudWatch Metric Alarms and configured alerts to be seamlessly delivered to Slack Channels, enhancing real time monitoring and proactive response capabilities
- Worked on Blue-Green Deployment Strategy using Helm Chart integrated with CI/CD Pipeline

- Implemented tracking remaining available IP addresses, and configured alerts to notify when the subnet's available IP addresses fall below 10, mitigating potential Glue job failures caused insufficient IP addresses in the subnet
- Engineered and deployed OpenID connect authentication with AWS, enhancing security protocols and ensuring comprehensive user session handlings
- Integrating Checkov into teams can proactively detect and rectify cloud infrastructure misconfigurations pre-deployment, mitigating potential security risks
- Used Azure DevOps service such as Azure Repos, Azure Boards, and Azure Test Plans to work and collaborate on code development, built and deployed application
- Implemented an advanced network analyzer in GCP, utilizing VPC Flow Logs and Stack driver Logging for real-time traffic analysis. Enhanced network visibility and performance monitoring through automated alerts and detailed reporting
- Implementing the alert in GKE cluster when the cluster gets an Update or Upgrade Events Available inside the cluster

Project: Image Loader

Environments: [AWS, GitHub, Zendesk, And Unix/Linux]

- Skilled in overseeing MySQL databases for reliable backup on data loads and delivering detailed reports to stakeholders, and also having extensive configuration expertise with proxy servers, including Nginx and HAProxy
- Checking and fixing the AWS vulnerability and upgrading the version of the resources using DNR Cookbook
- Proficiently decrypting hash codes to utilize Amazon Rekognition for sharing product image

Project: Nola Education

Environments: [VMware, AWS, MySQL, Service-Now, GitHub, And Unix/Linux]

- Managed user accounts and permissions, ensuring secure and efficient access to systems and applications
- Backed up On-Premises instances and generated new AMIs in AWS. Launched and configured EC2 instances from the AMIs, and ensuring optimal performance & reliability
- Led the migration of on-premises MySQL databases to AWS RDS, significantly improving scalability and availability
- Managed and resolved ServiceNow tickets, ensuring timely and effective solutions for user issues

ACHIEVEMENTS

- Awarded Best Employee of the Year in 2023 for outstanding performance and contribution to team success
- Earned Certificate in Atlassian Agile Project Management Professional through Linked Open-Source Learning Platform
- Completed CEH training course offered by EC Council through MSME government of India
